- docs/archive/conversations/UE6_Domino_Deterministic_Universe/Dominium_UE6_Domino_Deterministic_Universe__01_human_readable_report.md - Evidence: EVC-00588, EVC-00589.
- docs/archive/conversations/UE6_Domino_Deterministic_Universe/Dominium_UE6_Domino_Deterministic_Universe__06_reader_brief.md - Main decision candidates: custom deterministic core; Unreal as frontend only; server-authoritative MMO state; sparse procedural planets; single universe via partitioning; Domino as future adapter. Evidence: EVC-00599.
- docs/archive/conversations/UE6_Domino_Deterministic_Universe/Dominium_UE6_Domino_Deterministic_Universe__09_in_chat_reader.md - Evidence: EVC-00605, EVC-00604, EVC-00606.
- docs/archive/conversations/World_Architecture/Dominium_World_Architecture__05_reader_brief.md - The final user-confirmed world model uses a toroidal horizontal SurfaceGrid of 2^{24} metres per axis, one vertical Page of 4096 metres, 16 metre cubic chunks, runtime Q16.16 coordinates with 8-bit Segment addressing, and Q4.12 chunk-local save. Evidence: EVC-00675.
- docs/archive/conversations/_promotion/PROMOTION_WAVE_1_CANDIDATES_v0.md - Evidence: EVC-00698, EVC-00700, EVC-00704.
- docs/archive/conversations/_reader/by_chat/advanced_simulation_infrastructure.md - Evidence: EVC-00708, EVC-00709, EVC-00711.
- docs/archive/conversations/_reader/by_chat/app_runtime_platform_renderers.md - The idea is attractive because it supports broad distribution and long-term extensibility. But it is not a final decision. Dynamic plugins introduce ABI, packaging, security, and platform restrictions. Static registration may be simpler. A hybrid may be. Evidence: EVC-00716, EVC-00715.

- docs/archive/conversations/_reader/by_chat/architecture_ui_providers.md - Evidence: EVC-00738.
- docs/archive/conversations/_reader/by_chat/build_and_future_proofing.md - Evidence: EVC-00750.
- docs/archive/conversations/_reader/by_chat/chronology_celestial_systems.md - Evidence: EVC-00762.
- docs/archive/conversations/_reader/by_chat/dominium_architecture_iii.md - Evidence: EVC-00806, EVC-00805.
- docs/archive/conversations/_reader/by_chat/dominium_architecture_iv.md - A central decision was to separate the project into two conceptual layers. Domino is the reusable engine layer: platform abstraction, renderer abstraction, audio, UI, core services, package/instance management, simulation control, events, plugins. Evidence: EVC-00812, EVC-00811.
- docs/archive/conversations/_reader/by_chat/domino_engine_refactor_prompts.md - Do not assume unresolved items are safe to implement. Evidence: EVC-00865.
- docs/archive/conversations/_reader/by_chat/engine_baseline_architecture.md - Evidence: EVC-00866.
- docs/archive/conversations/_reader/by_chat/framework_open_source_provider.md - The most important rejected idea is using a full engine fork as the project's main foundation. It was rejected because it would likely make Dominium inherit the full engine's assumptions. The second important rejected idea is allowing raylib to become. Evidence: EVC-00886.
- docs/archive/conversations/_reader/by_chat/language_platform_architecture.md - Evidence: EVC-00898.
- docs/archive/conversations/_reader/by_chat/launcher_setup_architecture.md - Evidence: EVC-00916, EVC-00914, EVC-00915.
- docs/archive/conversations/_reader/by_chat/refactor_control_plane.md - AIDE changed most. It began as a possible full development environment and became a portable repo operating layer. XStack changed from a candidate universal system to a Dominium strict profile. Repo cleanup changed from moving folders to root recycling. Evidence: EVC-00993.
- docs/archive/conversations/_reader/by_chat/ue6_domino_deterministic_universe.md - Evidence: EVC-01018, EVC-01020, EVC-01019.
- docs/archive/conversations/_reader/by_chat/ui_editor_tool_editor_planning.md - Evidence: EVC-01026.
- docs/archive/conversations/_synthesis/CURRENT_PROJECT_ATLAS_v0.md - Domino is the reusable deterministic substrate: execution ordering, storage, replay, ABI-facing boundaries, and engine mechanisms. Archived conversations consistently treat Domino as reusable infrastructure rather than a one-off game binary. Evidence: EVC-01066.
- docs/archive/conversations/_synthesis/FULL_PROJECT_PICTURE_v0.md - Evidence: EVC-01077.
- docs/archive/conversations/advanced_simulation_infrastructure/dominium_advanced_simulation_infrastructure_architecture__05_reader_brief.md - Evidence: EVC-01106, EVC-01108.
- docs/archive/conversations/app_runtime_platform_renderers/dominium_app0_runtime_platform_renderers__05_reader_brief.md - Evidence: EVC-01118.
- docs/archive/conversations/architecture_codex_prompts/dominium_domino_architecture_codex_prompts__05_reader_brief.md - Engine/core must not know actual gameplay data definitions. Evidence: EVC-01133.

- docs/archive/conversations/architecture_ui_providers/dominium_architecture_ui_providers_robot_os_strategy__01_human_readable_report.md - The final UI/UX synthesis connects directly to that premise. The interface should feel like a robot operating system. The player boots into an OS, connects to a universe, downloads consciousness into a fabricated robot body, and disconnects into. Evidence: EVC-01145.
- docs/archive/conversations/canonical_structure_and_framework/dominium_canonical_structure_and_framework__10_accompanying_detailed_summary_report.md - Evidence: EVC-01210.

- docs/archive/conversations/domino_engine_refactor_prompts/dominium_domino_engine_refactor_prompts__05_reader_brief.md - Inspect the repository, then run or adapt CODEX PROMPT 1. Do not execute later prompts until Prompt 1 establishes specs, invariants, and scaffolding or until repository reality is mapped. Evidence: EVC-01290.
- docs/archive/conversations/engine_baseline_architecture/domino_dominium_engine_baseline_architecture__01_human_readable_report.md - Evidence: EVC-01291, EVC-01293.
- docs/archive/conversations/engine_baseline_architecture/domino_dominium_engine_baseline_architecture__06_reader_brief.md - Exact playtest command, bundle default strategy, missing time-anchor registry, geometry provider choice, DesignArtifact schema, Unreal shell decision. Evidence: EVC-01304.
- docs/archive/conversations/engine_baseline_architecture/domino_dominium_engine_baseline_architecture__09_in_chat_reader.md - Evidence: EVC-01309, EVC-01311, EVC-01313.

- docs/archive/conversations/xstack_lab_galaxy/dominium_xstack_lab_galaxy_handoff__05_reader_brief.md - Evidence: EVC-01409, EVC-01411.
- docs/canon/constitution_v1.md - Runtime behavior MUST resolve from profile data ('ExperienceProfile', 'LawProfile', 'ParameterBundle', optional 'MissionSpec' constraints). Evidence: EVC-01432, EVC-01438.
- docs/canon/glossary_v1.md - Deprecated terms must not be introduced in new runtime logic. Evidence: EVC-01446, EVC-01452.
- docs/repo/FOUNDATION_LOCK.md - This authorization remains narrow. It does not authorize broad Workbench UI, gameplay, renderer, native GUI, runtime provider expansion, package runtime, release publication, or domain feature work. Evidence: EVC-01469.

- docs/archive/conversations/Universe_Explorer_Planning/Dominium_Universe_Explorer_Planning_Handoff__01_human_readable_report.md - The main tradeoff was between ambition and discipline. - docs/archive/conversations/_reader/by_chat/refactor_control_plane.md - The conversation quickly shifted from simple prompt engineering toward harness engineering. The central lesson became that high-quality agentic development depends less on one perfect prompt and more on the surrounding system: repo instructions, task. Evidence: EVC-00986.

1.9 9. Contracts, Schemas, Packs, and Compatibility

- README.md - The active portability floor includes Windows 7 SP1, macOS 10.9.5, and Linux. C++17 language mode is allowed, but public ABI surfaces do not expose C++ classes, STL types, exceptions, RTTI, allocator objects, or compiler object layout. Evidence: EVC-00023, EVC-00024, EVC-00020.
- docs/README.md - Packs provide capabilities, data, and assets; executables do not embed content. Evidence: EVC-00035.
- docs/apps/CLI_CONTRACTS.md - All product CLIs provide deterministic, CLI-only modes. GUI/TUI remain opt-in and headless-capable where implemented. No packs are required for '--help', '--version', '--build-info', '--status', or '--smoke'. Evidence: EVC-01476.
- docs/apps/HEADLESS_AND_ZERO_PACK.md - '--help', '--version', '--build-info', '--status', and '--smoke' never require. Evidence: EVC-01481.
- docs/architecture/CONTENT_AND_STORAGE_MODEL.md - Evidence: EVC-01564.
- docs/architecture/REGISTRY_PATTERN.md - Serialization stores ids + schema versions (never strings). Evidence: EVC-01683.
- docs/architecture/SCHEMA_CHANGE_NOTES.md - Evidence: EVC-01705.
- docs/architecture/artifact_identity_law.md - An artifact is a persisted, exchanged, generated, or authored unit with identity, schema, version, provenance, and compatibility behavior. Packs, profiles, bundles, saves, instances, replays, diagnostic bundles, evidence packets, release packages. Evidence: EVC-01757.
- docs/architecture/barebones_client_shell.md - Evidence: EVC-01759.

- docs/architecture/mod_pack_trust_model.md - Evidence: EVC-01779.
- docs/architecture/native_architecture_policy.md - 'source native 64' is the full native product tier. Support claims in this tier require architecture, word size, endian, ABI, toolchain, language floor, provider capability status, evidence, limitations, diagnostics, and refusals. A supported or release. Evidence: EVC-01781.
- docs/architecture/project_graph_service.md - Source truth remains in contracts, manifests, registries, public headers, package manifests, app descriptors, module descriptors, provider descriptors, tests, and evidence packets. A graph fact must cite 'source ref'; missing graph facts do not imply. Evidence: EVC-01787.
- docs/architecture/provider_model.md - Provider descriptors declare kind, owner, version, stability, provided and required capabilities, entry surface, implementation path hint, language, ABI, platform constraints, determinism impact, security impact, threading model, lifetime model. Evidence: EVC-01789.
- docs/architecture/public_surface_registry.md - AIDE and Codex must use this registry before claiming a new exposed interface is public or stable. RepoX and future TestX lanes may consume the registry to catch unregistered public-looking surfaces. The current normal development proof gate is still. Evidence: EVC-01791.

- docs/architecture/schema_protocol_evolution.md - Registries are data contracts. A registry must declare an owner, version, stability, entry ID policy, duplicate policy, unknown-entry policy, entry lifecycle policy, and compatibility policy. Evidence: EVC-01796.

- docs/archive/conversations/Build_and_Future_Proofing/Dominium_Build_and_Future_Proofing_Architecture__06_reader_brief.md - Ask: "Which recommendation should become canon first: public surface registry or tuple-driven build contracts?" Then verify current repo state and write a narrow implementation prompt. Evidence: EVC-00114.

- docs/archive/conversations/Dominium_Complete_Conversation/Accompanying_Report/Dominium_Entire_Conversation_Accompanying_Report__10_accompanying_detailed_summary_report.md - Mass moves or broad rewrites can break build, tests, imports, packaging, and compatibility. Use small gated migrations. Evidence: EVC-00210.
- docs/archive/conversations/Dominium_Complete_Conversation/existing_companion_report_package/Dominium_Complete_Conversation_Companion_Report__human_readable_detailed_summary.md - The strongest technical design pattern was high-fidelity when sensed, collapsed when not sensed . A factory near the player can be visually rich. It can show belts, arms, lights, sparks, vehicles, modules, robots, and moving parts. Far away, the same. Evidence: EVC-00275, EVC-00280, EVC-00276, EVC-00278.

- docs/archive/conversations/Workbench_AIDE_Product_Spine/Dominium_Architecture_Workbench_AIDE_Product_Spine_Planning__01_human_readable_report.md - A major later phase shifted from pure architecture into repo-specific planning. - docs/archive/conversations/_promotion/PROMOTION_WAVE_1_CANDIDATES_v0.md - The conclusion was not a finalized implementation but a working architecture: each simulation domain should be deterministic, fixed-point, content-driven, versioned, replayable, and integrated through clear read/write boundaries. Evidence: EVC-00694, EVC-00695, EVC-00703, EVC-00702.
- docs/archive/conversations/_reader/by_chat/app_runtime_platform_renderers.md - The idea is attractive because it supports broad distribution and long-term extensibility. - docs/archive/conversations/Workbench_AIDE_Product_Spine/Dominium_Architecture_Workbench_AIDE_Product_Spine_Planning__01_human_readable_report.md - A major later phase shifted from pure architecture into repo-specific planning. Evidence: EVC-00976.
- docs/archive/conversations/_reader/by_chat/refactor_control_plane.md - A major middle phase focused on XStack. XStack began as a Dominium-specific governance stack grown out of TestX, then expanded into RepoX, AuditX, and other concepts. We initially explored making XStack a general portable metaharness, but that proved too. Evidence: EVC-00987, EVC-00986, EVC-00988.

- docs/archive/conversations/_reader/by_chat/universe_explorer_planning.md - The final plan accepted the newer repo structure is clean enough to stop giant structure prompts. - docs/archive/conversations/Refactor_Control_Plane/AIDE_XStack_Dominium_Refactor_Control_Plane__01_human_readable_report.md - AIDE itself also changed direction. It was first imagined broadly as an Automated Integrated Development Environment: perhaps a desktop app, extension family, multi-agent runtime, daemon, service, or control plane. Over time, the plan narrowed into. Evidence: EVC-00513.

- docs/archive/conversations/Timekeeping_and_2038_Resilience/Dominium_Timekeeping_and_2038_Resilience__06_reader_brief.md - The most important repo-supported decision is that Dominion authority must remain logical ACT, not wall-clock. The strongest recommendations are to freeze ACT units/serialization, audit DSYS timers, and keep civil time as projection-only. Evidence: EVC-00566.
- docs/archive/conversations/Timekeeping_and_2038_Resilience/Dominium_Timekeeping_and_2038_Resilience__09_in_chat_reader.md - Which repo files supported the Dominion conclusion? Evidence: EVC-00576, EVC-00579, EVC-00578.
- docs/archive/conversations/Timekeeping_and_2038_Resilience/Dominium_Timekeeping_and_2038_Resilience__10_accompanying_detailed_summary_report.md - The answer distinguished system width from time representation. The important conclusion was that 2038 is caused by signed 32-bit time counters reaching their maximum representable value. The risk appears where signed 32-bit Unix-style timestamps are. Evidence: EVC-00584, EVC-00583.
- docs/archive/conversations/UE6_Domino_Deterministic_Universe/Dominium_UE6_Domino_Deterministic_Universe__01_human_readable_report.md - The main outcome was a practical doctrine: use commercial engines for what they are good at, but do not delegate the canonical universe state to them. Determinism, resource accounting, fog-of-war authority, sparse planet edits, region handoff. Evidence: EVC-00590, EVC-00589, EVC-00592, EVC-00588.

- docs/archive/conversations/UE6_Domino_Deterministic_Universe/Dominium_UE6_Domino_Deterministic_Universe__10_accompanying_human_readable_detailed_summary_and_report.md - The answer challenged the framing. It said that UE6 should not be treated as a present production target because public UE6 tooling and detailed requirements were not established in the visible sources. It recommended building in current Unreal. Evidence: EVC-00616.
- docs/archive/conversations/Universe_Explorer_Planning/Dominium_Universe_Explorer_Planning_Handoff__01_human_readable_report.md - The main tradeoff was between ambition and discipline. Dominion's vision is huge: universe-scale exploration, arbitrary invention, civilization simulation, institutions, knowledge propagation, and moddable alternate realities. But the repo and doctrine. Evidence: EVC-00625, EVC-00622, EVC-00621.

- docs/archive/conversations/Timekeeping_and_2038_Resilience/Dominium_Timekeeping_and_2038_Resilience__06_reader_brief.md - The most important repo-supported decision is that Dominium authority must remain logical ACT, not wall-clock. The strongest recommendations are to freeze ACT units/serialization, audit DSYS timers, and keep civil time as projection-only. Evidence: EVC-00566.

- docs/archive/conversations/UE6_Domino_Deterministic_Universe/Dominium_UE6_Domino_Deterministic_Universe__01_human_readable_report.md - The main outcome was a practical doctrine: use commercial engines for what they are good at, but do not delegate the canonical universe state to them. Determinism, resource accounting, fog-of-war authority, sparse planet edits, region handoff. Evidence: EVC-00590.

- docs/archive/conversations/Workbench_AIDE_Product_Spine/Dominium_Architecture_Workbench_AIDE_Product_Spine_Planning__01_human_readable_report.md - A major later phase shifted from pure architecture into repo-specific planning. The repo had undergone extensive CONVERGE and POST-CONVERGE work: layout contracts, root allowlists, stale doc supersession, root recycling, AIDE control plane, build proof. Evidence: EVC-00650.
- docs/archive/conversations/World_Architecture/Dominium_World_Architecture__05_reader_brief.md - One canonical surface saved per planet for now. Evidence: EVC-00677.

- docs/archive/conversations/_reader/by_chat/app_testx_codehygiene.md - A large set of prompts was then generated to lock down architecture, determinism, performance, schema governance, rendering, epistemic UI, sharding, interest sets, and fidelity projection. This became the Phase 1 hardening layer. Additional audit prompts. Evidence: EVC-00724.
- docs/archive/conversations/_reader/by_chat/build_and_future_proofing.md - Evidence: EVC-00749.

- docs/archive/conversations/_reader/by_chat/engine_baseline_architecture.md - The visible conclusion was that the engine has real deterministic substrate pieces, but these must be hardened through small playable slices and proof/replay tests. Determinism is not only a mathematical preference; it enables multiplayer authority. Evidence: EVC-00868.
- docs/archive/conversations/_reader/by_chat/foundation_workbench_codex.md - Evidence: EVC-00876.
- docs/archive/conversations/_reader/by_chat/framework_open_source_provider.md - Evidence: EVC-00883.
- docs/archive/conversations/_reader/by_chat/launcher_app_layer.md - There was also an early suggestion to create a 'DUI' facade, a Dominion UI abstraction, to support native widgets and fallback rendering. This idea was useful as a conceptual stepping stone but was not ultimately locked as a final requirement in the form. Evidence: EVC-00909.
- docs/archive/conversations/_reader/by_chat/refactor_control_plane.md - A major middle phase focused on XStack. XStack began as a Dominion-specific governance stack grown out of TestX, then expanded into RepoX, AuditX, and other concepts. We initially explored making XStack a general portable metaharness, but that proved too. Evidence: EVC-00987.
- docs/archive/conversations/_reader/by_chat/testx_repoX_governance.md - Evidence: EVC-01003.

- docs/archive/conversations/_reader/by_chat/universe_explorer_planning.md - The final plan accepted the newer repo structure is clean enough to stop giant structure prompts. Remaining cleanup should be targeted: stale full-gate tests, pack layout canon, residual taxonomy, AIDE state classification, public header ABI. Evidence: EVC-01036.
- docs/archive/conversations/_synthesis/CURRENT_PROJECT_ATLAS_v0.md - Current repo truth: Dominion is a deterministic, contract-governed simulation game and operating environment built on the Domino deterministic substrate. It is about lawful simulation of invention, production, logistics, economics, settlement, trust. Evidence: EVC-01064, EVC-01063, EVC-01062, EVC-01073, EVC-01068, EVC-01072.
- docs/archive/conversations/_synthesis/FULL_PROJECT_PICTURE_v0.md - Domino is the deterministic substrate. Dominion is the official game, product, and domain layer. Workbench is a governed validation and inspection environment. Setup and launcher compose product instances. Tools validate, generate, audit, and migrate. Evidence: EVC-01075, EVC-01084, EVC-01085, EVC-01083, EVC-01074.
- docs/archive/conversations/_synthesis/PROJECT_SYNTHESIS_BOOK_v0.md - The archive describes Dominion as a long-horizon deterministic simulation product: a game, engine-backed operating environment, validation workbench, content platform, and governance-heavy repository. Across the conversations, the recurring intent is not. Evidence: EVC-01086, EVC-01088.

Determinism is not only a mathematical preference; it enables multiplayer authority. Evidence: EVC-00868.
- docs/archive/conversations/_reader/by_chat/foundation_workbench_codex.md - Foundation Lock was the governance gate that determined whether narrow product work could begin.
